AUSTRALIAN  
MANUFACTURER  
AND PROUD OF IT

## single housing filter

Onga water filters offer the widest range of filter cartridges to counteract most undesirable water quality concerns. The standard range of filters are designed and manufactured in Australia to suit local conditions. Your Onga dealer will be able to help you select the best filter for your application and requirements.

## whole of house filter system

This filter can be installed on the main cold water line entering your home, whether tank water, well water or town supply. Clean water in the household will protect your plumbing system from dirt, sediment and rust. It will add years to appliance life and minimise repair costs. The whole of House filter is easy to install, and replacement of filter cartridges is quick and easy, with a pressure relief button and the supplied filter wrench.

## country twin filter system

This system has two filters in one package. The first is coarser and screens out larger particles and dirt... the second, finer filter reduces bad tastes and odours from organic matter and chlorine. This twin filter system comes complete with all fittings required for undersink installation, and includes the dedicated benchtop tap. The filter cartridges supplied with this system will suit many applications and types of water quality. If other quality problems are present, the complete range of filter cartridges can be installed into these housings to reduce most undesirable water attributes.

## town twin filter system

This system has the same great purifying features as the Country Twin Filter system, and includes an easy to install multi-function backflow prevention valve. As with the Country System, installation is made quick and simple with tubing and quick connect fittings that do not require the use of tools or sealing materials. The filter cartridges supplied with this system will suit many applications and types of water quality. If other quality problems are present, the complete range of filter cartridges can be installed into these housings to reduce most undesirable water attributes.

## cartridges to suit most applications

### Taste/Odour/Chlorine Reduction

#### Combination Duty Carbon Cartridge

PN 705880 5 Micron

- Dirt/Rust • Silt • Taste/Odour • Chlorine

This combination cartridge is ideal for use in the Single Water Filter Housing or second stage in the Twin Housing. The cartridge reduces sediment and improves the taste and odour of water.

#### Granular Carbon Filter Cartridge

PN 705881 5 Micron

- Taste/Odour • Organics • Chlorine

This premium carbon cartridge has a high capacity to reduce taste/odours/chlorine/ organics from your drinking water. The filter cartridge can be used as a point-of-use cartridge in the Single Water Filter Housings and is standard as the second stage of the Dual Drinking Water Systems.

#### Bacteriostatic Carbon Cartridge

PN 705882 1 Micron *with silver*

- Dirt/Rust • Silt • Taste/Odour • Chlorine

This combination cartridge is ideal for use in the Single Water Filter Housing or as a Second stage in the Twin Housing. The cartridge inhibits the growth of bacteria whilst improving the taste and odour of your household water.

#### High Performance Carbon Block Cartridge

PN 705885 0.5 Micron

- Taste/Odour • Chlorine/Organics
- Parasitic Cysts - Giardia - Cryptosporidium

Suitable for use in the single Water Filter Housings and used as an optional replacement cartridge in second stage of the Twin Drinking Water Filter Systems.

### Sediment Reduction

#### Whole of House Pleated Re-usable Filter Cartridge

PN 705875 20 Micron

- Dirt • Rust • Sand

For use in Whole of House Water Filter Housing in larger sediment reduction applications. This high flow capacity cartridge is washable and re-usable.

#### Whole of House Filter Cartridge

PN 705876 25 Micron

- Dirt • Rust • Silt • Sand

General purpose sediment reduction cartridge, for use in the Whole of House Water Filter Housing.

#### Heavy Duty Filter Cartridge

PN 705870 5 Micron

- Dirt • Rust • Silt • Sand

General purpose sediment reduction cartridge, for use in Single Water Filter Housings and as first stage of the Twin Drinking Water Filter Systems.

#### Pleated Re-usable Filter Cartridge

PN 705871 20 Micron

- Dirt • Rust • Sand

For use in larger sediment reduction applications in the Single and Twin Water Filter Housings. This high flow cartridge is washable and re-usable.

#### Heavy Duty Filter Cartridge

PN 705872 25 Micron

- Dirt • Rust • Silt • Sand

For use in water with increased level of sediment or as a roughing filter. For use in Single Water Filter Housing or first stage of the Twin Drinking Water Filter Systems.

# Water Filter Systems

Premium water filtration systems to provide clean and fresh-tasting water for your home

**onga**  
TAKING WATER FURTHER

A woman with blonde hair tied back, wearing a white short-sleeved top, is shown in profile drinking from a clear glass. She is positioned in front of a large, cascading waterfall. The scene is set outdoors with lush green foliage in the foreground and a stone wall visible on the left side of the waterfall. The overall atmosphere is fresh and natural.

**does your water supply have  
an unusual taste or odour...**

**the solution is clear**

or smell of chlorine, or contain organisms such as parasitic cysts? Onga have the solution that will reduce these along with other typical contaminants such as pesticides, dirt, sand and organics which can be found in household plumbing...

**‘Onga offer filters to suit your water supply...’**

Filters which provide unlimited clean and fresh tasting water for drinking and cooking at the touch of a lever. Onga offers filters to improve the look, taste and odour of your water... no matter what the water quality. You will find that Onga has a comprehensive range with a filter system to best suit your needs.
